# Summary of Products

---

---

**autoecat** - The native format AAIA Electronic Catalogue has been developed by **ams** in conjunction with more than two hundred manufacturers and currently contains more than 75 Million application entries covering model years 1930 through 2003. The catalogue viewer leverages the data to provide the user with a host of convenience features, such as a buyers guide, as well as pictures and diagrams where critical, such as in exhaust systems.

**autoecat.com** - Is the web site of the Public Version of the Electronic Catalogue. There is a free subscription service provided for those not ready or wanting to utilize the database for a variety of B2B applications, all designed at streamlining the procurement process. The system is built around the concept of Sponsors and Subscribers, the Sponsor controlling what view is provided the subscriber (Customer).

**iCONNECT** - This product is hosted on **autoecat.com** and is designed to offer B2B ordering at any level of the supply chain. The system is built around the concept of Sponsors and Subscribers, the Sponsor controlling what functionality is provided the subscriber (Customer). This allows the view to be “branded” as belonging to the sponsor, thereby enhancing subscriber loyalty. This unique functionality is provided by customer profiles, maintained on the web by the Sponsor. The current version allows catalogue lookup, buyers guide, stock checks, price checks, interchanges, account inquiry and quotations.

**iSERVE** - Is comprised of a self-contained, IP based, Linux powered system containing both the Catalogue Database as well as a transaction server providing **CISS** ( **C**atalogue **I**nterface **S**oftware **S**tandard ). The purpose is to allow integration to both internal systems as well as support of remote customer access and electronic ordering. The host POS System sends requests directly to the **iSERVE** processor which will serve back either web pages or flat files for display by the host application.

**COUNTERPOINT** - Is a registered Trademark of **ams** and is a modular, state-of-the-art, POS system that directly integrates with the **iCONNECT** and **iSERVE** modules as well as the **autoecat** database. The system is UNIX based and currently utilizes IBM PowerPC hardware architecture.

**Coming Soon!**

**iESTIMATE** - A logical extension to **iCONNECT** that will integrate the Mitchell Labor guide for the creation of complete estimates. This will be hosted on the **autoecat.com** site and will establish a new benchmark price for the rich functionality provided.

**iSHOP** – Compliant shop management system.
